jQuery

Date 5-9-21   Page 477

- Do You Know?
- HTML
- CSS
- JavaScript

jQuery -

- jQuery is a fast, small, and feature-rich JavaScript library.
- It makes things like HTML document traversal and manipulation, even handling, animation, and Ajax much simpler with an easy-to-use API that works across a multitude of browsers.
- jQuery will run exactly the same in all major browsers.

Syntax - $(selector).action(callback)

Ex (i) $("#btn").click(function()
```
{
        alert("Hello GeekyShows");
});
```

(ii) $("#btn").click(function(){
```
        $("#image-id").hide(1000, function(){
                console.log("Image Hide ho chuka hai");
        });
});
```

(iii) $(document.ready(function()
```
{
        $("#btn").click(function()
        {
                alert("Hello Geeky Shows");
        });
});
```

(IV) jQuery. no (onflick();
jQuery (document). ready (function ($)
{
        $ ("btn"). click (function ()
        {
                        Alert ("Hello Greeky Shows");
        });
});

Note:- $ के जगह हम jQuery भी लिख सकते हैं । $ jQuery
       को एक alias है ।

Adding jQuery-

Using CDN-
<script src="https://ajax.googl.apis.com/ajax/libs/jquery/3.5.1/jquery.min.js"></script>
• Download jQuery

Selectors- jQuery use CSS syntax to select elements and in addition, it has some own custom selectors.
• Element Selector-
   Ex- "p", "div", etc.

• Id Selector-
   Ex- "#btn1", "#myid", etc.

• Class Selector-
   Ex- ".myclass", ".city", etc

• Universal Selector-
   Ex- "*"
